Rx

Patient: **John Doe** Age: 34 Visit Date: 02-Mar-2026 Dx: Focal Impaired Awareness, Secondary Generalized Tonic-Clonic

Seen today for routine epilepsy follow-up. Since last visit, patient reports approximately 5 seizure episodes overall, average duration 4.5 mins, with seizure clustering: No. Patient describes a metallic taste and brief déjà-vu as warning signs.

On current regimen (Levetiracetam (Keppra) 1000mg BID, Lamotrigine 150mg BID), patient reports occasional dizziness, more noticeable in the morning dose. Regarding sleep, sleep has improved modestly, averaging 6-7 hours. Cognitively, reports improved mental clarity compared to prior visit.

Overall clinical impression: seizure control reasonably stable, quality-of-life trending favorably. Plan: Maintain current dosing; encourage consistent sleep schedule and trigger avoidance.
